BAREROOT RHUBARB

Chipmans Canada Red Seed Source Rhubarb | *Rheum* 'Chipmans Canada Red'

KEY FEATURES

Chipmans Canada Red Rhubarb is a perennial variety known for its bright red stems and exceptional sweetness, making it an excellent choice for pies, sauces, and preserves. With a compact growth habit, it reaches a height of approximately 18 inches and spreads to about 24 inches. This variety performs best in full sun and is hardy in USDA Zones 3 through 8.

BAREROOT SHIPPING AND HANDLING

Bareroot rhubarb is shipped as dormant plugs that have been carefully frozen to maintain quality during transit. Each bag contains 10 plugs, packaged with wood shavings to protect them from drying out and to ensure they arrive in optimal condition. Upon delivery, plugs may still be slightly frozen and should be thawed slowly at room temperature or in a cool location before planting.

PLANTING TIP

When planting, make sure the bud is buried no deeper than 1" below the soil surface. Planting too deep can delay growth or damage the crown.

ADDITIONAL PRODUCT OFFERINGS

In addition to bareroot offerings, Chipmans Canada Red is also available in container 5.5 providing flexible options for growers and retailers.
